which was fitted into a notch in another stick lying on the ground. Dry fibers were used to catch the sparks. When the fibrous material began to smoulder the firemaker would blow on it gently until a flame appeared. Dry grass and wood then were added. As this task was an arduous one, fires seldom were permitted to go out in the village. 372

RAIDING

Some economic importance must be imputed to the raids which the Terena made upon their neighbors. They mention raiding the Ilai, but who the Ilai were is not clear. It is possible that the word "Ilai" is a Terena word for the Chamacoco, for the Chamacoco were being repeatedly raided by their eastern neighbors, particularly the Mbayá. The Terena tell of capturing horses, sheep, and cattle and, above all, slaves. The practice was to put men and women to death, keeping only the young boys and girls. After these young slave children grew up they were part of the tribe and it was difficult for them to escape and return to their own people about whom they now knew very little. Slaves were made to cultivate the soil, hunt, fetch wood and water, build houses, tend livestock, and to take part in warfare and even assist in ceremonials. Besides their economic importance, slaves, of course, enhanced the social prestige of their owners. 721 567 727 [554]

PROPERTY AND INHERITANCE

The Terena can now give only very sketchy information about their past property rights and inheritance. Whether they ever had a common tribal territory is not clear. What appears most likely is that the members of each village laid claim to the cultivable lands surrounding the village and to certain hunting and fishing grounds. Each family group had its own house and fields under the trusteeship of the family head which passed to the man's younger brother or son after his death. Individuals owned their own clothing, tools, weapons, and ornaments. Livestock and slaves were the property of the warrior who captured them, but their use and services were available to the members of the household in which the warrior lived. The Terena state that the produce of the field and the chase, although owned by individual households, would be shared if anyone was 421

/42 cont./ [Traditional Culture]

563 But before we analyze the mechanism of "status" acquisition or vertical mobility in Guaná society, we shall attempt to elucidate further the type of ethnic stratification revealed by the presence of the Kauti.

178 The first type of stratification established in the old
563 Guaná communities must have resulted from the domination of
● 727 this large agriculturalist group over groups of individuals captured from other tribes, /43/ who fitted into the Guaná social system as captives (Kauti). Besides, this type of ethnic stratification was most probably already familiar to the Guaná even
[171] before they settled in the Chaco. Max Schmidt, for example, in his studies on the Aruák groups, shows that such a stratification appeared among them rather regularly and, in a certain sense, as a necessity for their expansion. (66) This ethnic

66. "It would be interesting to know by what means Aruák society managed to obtain for itself, on the basis of its cultivation of the soil, the position of seignior over another class of the population, which submits to laboring for the interest of its masters, helping them in the obtaining of the necessary means of production. In order to create, under the conditions now prevailing, a subordinate ethnic stratum, the Aruák tribes would have to fulfill two conditions. They would have to establish relations with the population of neighboring tribes and, then, these relations would have to be managed in such a way as to

Terena

of social change. The present study is particularly compatible with this approach, emphasizing as it does the function of the Terena matrimonial complex in strengthening tribal solidarity and its role in the overall fabric of tribal and intertribal relationships. The approach particularly commends itself for its more adequate handling of "conformity" and "deviance" with respect to social structure.

Whether recorded by us or gleaned from others, the Terena material on which the present structural analysis is based was all collected by evoking "tribal memory" through the use of older informants, since Terena, i. e., tribal, social structure has long since ceased to exist. On the other hand, for all practical purposes there are no ethnological data recorded before the 19th century. Even Sanches Labrador's 18th century classic, although dealing with the Guaná or Txané Indians, fails to mention specifically thetir Terena sub-group. Castelnau, Taunay and J. Bach, writing a century later, are the first major sources. Still, even though they represent the best ethnographic sources of the past century, their data on the then current Terena social structure are insignificant. Distinctive contributions in this area begin with the missionary Alexander Rattray Hay, who lived with the Terena in the village of Bananal from 1917 to 1920. By this time the group was already largely acculturated.[7] The only other studies based on field work are those of Kalervo Oberg and Fernando Altenfelder da Silva, which derive from a stay in 1946 in Bananal, and the more specialized studies of Herbert Baldus with reference to certain Terena culture complexes—such as on the mythology and the succession to the chieftainship. They were of great use in preparing the present analysis.

1. Social Stratification and Ethnic Stratification

Max Schmidt, studying the process of expansion of Arawak speaking groups, indicates as an invariable element in their communities the presence of prisioners of war, or simply "captives". He leaves us with this question: "It would be interesting to know by what means Arawak society (which he treats as a single unit—RCO) was able to obtain for itself, starting as an agriculturally based people, the position of lords over these other population groups, who became the means of obtaining needed production. To create under then-existing conditions

under which a phenomenon normally exists, it to study its "deviate", or anomic, forms. He notes further that these pathologic forms are the ones that determine the breakdown of social solidarity.

[7] The concept of acculturation allows a two-way application: (a) as to *process*, by which it assumes an explanatory character; and (b) as to *state* or "degrees of acculturation", by which it can be used for more descriptive purposes, as in the present case (cf. Beals, 1954 : 627).

Terena

a subordinated ethnic strata, the Arawak tribes would have had to meet two conditions. They had to enter into relationships with neighboring tribes and, next, these relationships had to be manipulated in such a way that they resulted in a state of dependence" (1917, Cap. III). If this did not happen with the Terena (or with the Guaná as a whole), since they had learned from the Mbayá-Guaikuru more efficient methods of capture (of Txamakoko, Txikito, Guató, etc., individuals),[8] they at least maintained a form of social organization that included the integration of prisioners of war —and their descendants— into the groups as laborers.

The consequence of this situation of dependence in Terena social structure was the creation of assymetrical relationships between this Arawak group and the Kauti (the Txané name used to designate the "captives" obtained in war or by the sorties organized for this purpose). It is true that these Kauti were not always best employed in agricultural work, since many of them came from tribes that subsisted on hunting and gathering techniques exclusively. These Kauti were assigned to less technical tasks or even used as domestic help. If such chroniclers as Taunay (1931 : 21) or Castelnau (1949 : 247) give a true picture, the treatment accorded the Kauti was the most benign possible, indicating more of a protective attitude than an exploitive [illegible]. For an agricultural people such as the Terena, the Kauti had [illegible]onomic significance. They represented more a source of prestige (po[illegible]ical, and only secondarily economic), not only for the in group, but principally in intertribal relations with the Mbayá-Guaikuru, their neighbors and allies. These latter made greater use of their "captives", also finding in them an important source for population increase, needed because of the customs of infanticide and abortion which increased sharply following the Spanish conquest of the Chaco. Although the Terena practised infanticide, it never reached the proportions it did among the Mbayá-Guaikuru, and especially among the Kadiwéu. Probably the place given to the Kauti in Terena society would correspond roughly to that accorded strangers, ethnically different and, as a consequence, treated with a certain indifference and as objects of trade, i. e., to be calculated as goods in tribal commerce (Taunay, 1931 : 21). Yet it is a fact that the Kauti, as a "class", were integrated into Terena social structure, since the structure provided the means

[8] Words from the Indian language have been transcribed according to the convention of the Brazilian Anthropological Association, as published in the *Revista de Antropologia* Vol. II, N° 2, December, 1954. This convention attempted to mediate the problems of accurate transcription and usual lack of phonetic type fonts. The only symbols that are somewhat unusual are x=sh, tx=tsh, ch Stress is written only when it falls on a syllable other than that stressed under normal Portuguese usage.
